# MINES AND PROSPECTS UTAH'S GREATEST MINING PROSPECTORS INDUSTRY

Celumbus Uncovers a Six-Foot Breast.

ALL OF ALTA IS EXCITED

Came While Annual Meeting Was On.

Sensational Disclosures in Virgin Territory-Company Took in Nearly \$100,000 During Year.

The financial statement with which the Columbus Con. Mining company closed a most prosperous anniversary yesterday afternoon told of receipts aggregating \$98,000, of which sum \$28,829 was derived from the sale of ore from 111/2 cents, the day closing on the followits mines at Alta. The disbursements, including payments on the acquisition of property, the erection of buildings and equipment generally, in addition to mining, reached as much, although in the treasury at this time is a balance of 41,000 shares that on the local market could be readily converted into a big cash asset. The manner in which the sturdy youngster has climbed into prominence during the year was no more gratifying to the shareholders who had gathered in annual session, however, than were tidings from camp during the day that told of the most sensational strike in the history of the undertaking. An average from a six-foot breast of ore, said Manager Jacobson, revealed as much as 21.3 per cent copper and 36 ounces silver, with 34 gold per ton, while a sample with which the superintendent arrived yesterday morning showed 40.7 per cent copper returns on the other metals promised by the assayer today. This breast of by the assayer today. This breast of ore, which occurs in a ledge the width of which has not yet been determined and at a vertical depth of 400 feet, was encountered in the drift running south from the main Columbus tunnel and in territory that had hitherto been un-prospected. The management, as were the shareholders, was unable to conceal its enthusiasm, and the board of directors will leave for camp to make personal inspection of it this morning. In the election of officers for the new year Tony Jacobson was made presi-

year Tony Jacobson was made presi-dent and general manager; Clarence K. McCornick, vice-president, Arthur E. Snow, secretary and treasurer. With William B. Jeffs of Rockland, Mich., and B. F. Cheynoweth of Houghton, Mich., these officials will serve the com-pany as directors, the new board to meet again on Thursday. meet again on Thursday.

The work of the year has been most

intelligently prosecuted under the man-agement of President Jacobson, and with the projected concentrator in ope ration the earnings will be materially promoted. Certainly Columbus has set the pace at the old camp and in its success mining circles generally will re-

#### OHIO COPPER ORES.

#### Everything in Readiness for Active Movement to the Concentrator,

Manager Tibbets of the Ohio Mining company's Bingham properties, who was in from camp again during the day, says that while the failure of the manufacturer to reach the plant with certain fittings has delayed the remodelling of it, he is positive that it will go commission on or before January Meanwhile the tables have been installed, the tracks between the mines and mill laid and the big bin constructed, while a tonnage of first-class ore extracted in the opening up of the All's Well ledge is being forwarded to the To him, as to the remainder of the management, the outlook is most

#### SOME CENTURY EARNINGS.

#### Story That Its Bread Money Is to Be Increased Advances the Shares.

It is said by shareholders professing to have been officially advised that the Century dividend will, the present month, be increased to 2 cents a share. or \$3000, and that it will continue at this figure indefinitely. It is also announced that the earnings for December were piled up to a total of \$16,768, the largest in the history of the undertaking, and that the stamps are at present dropping on \$12 gold rock, with not a little of it exposed in the mine. It was upon these reports that the shares of the company made the sharp advances

Ore and Bullion. The week in the ore and bullion market opened on settlements amounting to \$84,900, McCornick & Co. reporting

#### SOSTON'S BARBER REGULATIONS

#### Board of Health Orders Sterilization of All That Barbers Use on Customers.

A special dispatch from Boston, May 5, 1900, to the New York Sun, gives new regulations of the Boston Board of Health as to barber shops: "Mugs, shaving brushes and razors shall be sterllized after each separate use thereof. A separate, clean towel shall be used for each person. Material to stop the flow of blood shall be used only in powdered form, and applied on a towel. Powder puffs are prohibited." Wherever Newbro's "Herpielde" is used for face or scalp after shaving or hair cutting, there is no danger of infection, as it is antiseptic, and kills the dandruff germ. Sold by leading druggists. Send ide in stamps for sample to the Herpicide Co., Detroit, Mich.

them as they follow: American bulllon, \$41,000; gold, silver, lead and copper ores, \$43,900.

In the metal market silver ruled at 56% cents an ounce, lead at \$3.50 per hundred pounds and casting copper at 11½ cents a pound.

THE DAY ON 'CHANGE.

Century Again Sets the Pace, With Daly-Judge Recording Advances.

For \$7805 the investor at yesterday's all on the mining exchange walked forth with parcels containing 21,155 hares of stock, nor was the market at ts worst. On the contrary, the pace set by Century of Park Valley with the premonition of an increased dividend, and the price commanded by Daly-Judge imparted to the general condition a strength that has not been per-ceptible in a moon or more. Grand Central, which had put on the brakes, found a customer at \$3.60, while Con. Mercur was reduced to 68% cents on ugly gossip, and Little Bell of Park City to \$1, although some people are packing around "a few" which was handed to them at \$8 a share. Nail-driver was firmer and brought 65 cents a share, although there was not much consolation in that for the man who bought when it was originally exploited, while Daly closed to a bid of \$2.42\%, with Lower Mammoth changing hands at 38½ cents. Uncle Sam was marked down to 23½ cents and New York to 9 ents while Carlsa remained firm at

#### 60.00 Wolverine A NEW RECORD.

### Tonnages Out of Camp of Bonanzas

Again Establish a Record. The year at Park City has opened upon an output of ore and concentrates exceeding 15,000 tons per month, an achievement that exceeds all previous records, and that this will be broken as the new year ages there is no shadow of doubt. To sustain it the product of the new mill erected by the Kearns-Keith company has made its appearance at the valley furnaces, while from the Daly-Judge is now coming to the smelter an average of seventy-five tons of concentrates daily, with intermittent lots from other sources. The Silver King and Daly West are each maintaining the usual output, with the latter preparing to increase its output of concentrates, while the old Daly, with its record of nearly dividends and a gross output of over \$12,000,000, is coming to marshaft in virgin ground. These, without reference to the Comstock and California, the Nalldriver and others which appeared at intervals at the smelter, are sufficient to sustain the prophet who is almost ready to wager his last oaf that the production of 1904 will show an increase of quite 60 per cent. There is no doubt that a cluster of the younger generation will be added to the roster of producers during the year, and with the activity now at camp there is no telling at what hour the older bonanzas may find a rival along-

#### BIG LOT OF MATTE.

#### Heavy Consignment by the Ladd Metals Company.

The management of the Ladd Metals company, operating its furnaces at Mineral, on the Oregon Short Line, yesterday drew down a check for a dozen carloads of matte that is being for-warded to the furnaces of the United States smelter in this valley, and will follow it with another consignment in a short time. Under the management of Mr. Zera Snow of Portland, Or., the undertaking has burst upon the horizon with a promise that compares favor-ably with any of the youngsters, and while the quality of the product is not revealed it is said that it averages about \$100 per ton. The new plant is reported doing excellent work at this with much to foretell enlargements before the cose of the year

#### Assessments at Pioche.

Assessments at Pioche.

One of the greatest evidences of confidence among the citizens of Pioche in this district is the regularity with which annual assessments have been performed, says the Record. The requirement by law of \$100 expenditure on mining locations has been observed almost to a claim. This means much and is a concluse indication to the public at large that the mineral resources of this section are worth holding on to. In the performance of this annual work some important strikes have been made, all of which demonstrates that development alone is necessary to place many properties on a paying basis. It is a fact ladeed that few camps, if any, in the West possess the actual mineral resources that Ploche and surrounding country does.

## ON COPPER MOUNTAIN

Sensational Percentages in the Red Metal.

Copper Queen Group to Be Developed.

Eighteen Inches of Ore Afford \$100 in Gold and Silver-Rumors of

cannot but place it among the more now putting a tunnel into its group,

On the "other side" of the mountain is said that the sons of Superintendent Hoppie have opened up a fissure eighteen inches between walls, carrying copper glance and containing \$100 in gold and silver per ton, and with these values it should not be long until the public is afforded a taste of the pudding.

The impression prevails at the camp that the Messrs. Lewissohn will begin the active production of ore from the Copper mountain group the present seasen, this the only thing required to give the camp, which is practically on the line between Utah and Nevada, the prominence to which it is entitled.

#### MIDAS'S NEW MILL.

### Way to Deep Creek Property.

For the restoration of the Midas com big earnings the present year.

#### AT LOWER MAMMOTH.

#### Daily to the Valley Furnaces.

While the quality is not the best of which the ledges have shown themselves capable, Superintendent Ball of the Lower Mammoth is forwarding an average of 100 tons or ore daily to the valley furnaces from that Tintic property, while the search for higher grades is being steadily prosecuted. Indeed, everything underground is in most satisfactory condition and important changes are possible on any shift.

## Plant Now Being Tried Out and Its

The limbering up of the new concentrator with which the Uncle Sam of Tintic is to add to its future earnings has been in progress since Friday last, and while its adjustment has not been completed nor the active feeding of ore begun, the results thus far, said the management yesterday, have gratified every expectation. It is expected that the production of concentrates on a commercial scale will have begun by the middle of the month. Meantime the he middle of the month. plant is promised a steady volume of milling ore, while the usual amount of first-class is coming to the furnaces of the American Smelting and Refining company.

With the main tunnel on the Eagle & Blue Bell of Tintle maintaining Its present progress into the zone, active work on the proposed shaft which will render the ore bodies more accessible will begin early next month. Already the tunnel has reached a point 1861 feet from its portal and about ninety feet more will advance it to that through which the shaft is to drop. From the 300-foot level upraising will begin, while your business by the intelligent use of the Oscillating Mineograph. We will same course to be followed from the show you how it works. Pembroke other levels to a depth of 750 feet, from which latter it will continue to drop.

WORK OF THE LEWISSOHNS

a Furnace at Camp.

The year at Copper mountain, Box Elder county, has opened upon a spectacle of activity that if persisted in productive of Utah's sources of wealth the present season, said C. E. Dugger, president and general manager of the Giant Copper Queen company, which was recently launched and which is the ledge upon which at the surface reveals a width of about seventy feet. From this he brought samples of copper-bearing ore, which are now on exhibition at the offices of Col. Kaign, that indicate very high percentages, while he is relying on something even better at greater depth. On the group purchased by the Lewissohns and which is characterized as the Rockefeller property at camp the tunnel has been driven into it a distance of 1020 feet, where the ledge is tapped at a depth of 800 feet, while the developments in their contrety disclose a volume of ore which compares, says Mr. Dugger, with any in the State. Samples from this show a cyprite along with the "copper oxides," as they are commonly designated, while Superintendent Fred Hoppie claims that the whole will maintain an average of 10 per cent copper.

#### Lumber for the Plant Now on Its

pany's mill in the Deep Creek country ket with wealth from its new Mazeppa lumber is now being forwarded to camp, and as soon as skill can make it possible the plant which was wiped out by fire will be rebuilt. There will be some changes in the structure, but not in the methods, said Manager Chipman, and it is hoped that the season will see it extracting the gold from thirty tons of ore daily. Meanwhile the usual work is progressing underground with the ores maintaining a fine aver-

#### UTAH CON. SMELTER.

#### Some Improvements Will Interest the Country's Smeltermen.

To Mines & Metals of Scranton, Pa. S. Sorenson, mechanical engineer for the Utah Con., has contributed a most instructive description of the enargements row being made at the

Highland Boy smelter: "It would not always be wise, even perations in the late fall; Highland Boy's good luck has evidently been passed on to its successor, the Utah Consolidated, for the extension to its already large plant at Murray, which was only finally decided on in the middle of October, has made considerable headway in unusually fa-

vorable weather," says Mr. Sorenson.
The foundations for the converter ust chamber and stack, the new Mc Dougal furnaces and the roaster building, as well as for the extension of the smelter building and the new furnace stacks, are finished, and those of the stacks, are missied, and those of the new reverberatories are well forward. The extensions under way are as follows: (1) An addition of 87 feet to the smelter building, thereby making it 464 feet long; this addition will contain two new reverberatory smelting furnaces 43 feet 6 inches by 17 feet; (2) a dust chamber 56x27x18 feet, and a stack 5 feet 6 inches by 190 feet for the converters alone; (3) an addition to the roaster building 126x65 feet, to contain 12 more McDougal calcining furnaces; and (4) to take care of the extra horsepower required, as well as to have a stand-by engine to secure immunity from stoppages for engine overhauls and repairs, there will be a new Nordberg-Westinghouse engine generator. In addition to these main items, there will be sundry small ones. such as extra slag cars and hopper cars for ore, coal and calcines, and in addition to the machine shop and boiler

The new reverberatories do not differ in any radical respect from the last ones built, the greatest difference being 2 feet extra in their width and the increased width and area of the firebox, 10x6 feet. They will, however, still be provided with forced draft, the normal height of stack, viz., 80 but with the area of the latter in-creased. The binding, which is very olid, is of I beams instead of rails Perhaps the most decided innovation is the substituting of a steel box beam in place of the usual massive cast-iron horn and conker plates. No provision has been made in these furnaces, as the last ones built, to preheat the air supply, as the experience with the former ones, in that respect, was not satisfactory. Besides, it is the inten-tion, at a later date, to apply the heat of the flue gases to steam generating as is successfully being done at the Anaconda smelter. This is considered a more practical method of utilizing some of the waste heat than preheat-

ing the air as hitherto attempted.

There is no special feature of the converter dust chamber; it has brick walls and steel floor and roof, with numerous cleaning doors in the floor, and is set upon cast-iron pillars 61/2 feet above the ground level for the passage of cars underneath when cleaning out. The high independent steel stack will both improve working conditions and abate the smoke damages to adjoining

rops.

Besides many minor improvements which the company's experience has evolved in working its first installment of eight McDougal roasters, the chief

feature of interest in the new plant is

s has been exploited. That depth is between the rows of them for the en-equired to demonstrate the merits of tire length of the building, and is conflue (recently attached to the present McDougais), which leads into the large central dust chamber and thence to the stack. This will give a long passage for the settlement of the dust and en-able the latter to be drawn off and smelted practically continuously as deposited, with a minimum of labor and

In the engineering department, the Nordberg-Westinghouse which has been in continuous service for nearly 4 years, stopping but for a few minutes once a week) will be relieved by the installation at its side of a younger and slightly larger sister. For though the generator will have the ame nominal capacity of output of 250 kilowatts, the engine will be 16x32x36 feet to give that output at 100 revoluin genial Utah, to commence building tions per minute with the maximum

improvements and additions completed (which, it is expected, will be in May) the capacity of the plant will be increased from about 500 ions daily to about 700 tons. This ore entirely derived from the company's mine at Bingham, a fact which con-tributes, perhaps, not a little to the steadiness and efficiency with which

this plant is operated.

The number of new McDougals is not proportional to the increase of out-put desired, but is in excess of that so is to admit of cutting out some old four-decker straight-line roasters. four-decker straight-line roasters, which are the principal instruments of involving the company in litigation over smoke damage. The smoke from the McDougal type of furnace is readily controlled and confined to the flues and stack, and, as the latter is having 50 feet added to its height (already 195 feet), trouble from that source should be minimized, as it will, when com-pleted, be the highest stack in the valev. This additional height to the stack being put on without interfering with the steady operation of the works.

The latter half of the coming year should therefore enable the company to materially add to the substantial divilends it has been earning for the shareholders in this successful mine as a result of its progressive yet cautious

#### The Copper Situation.

The Copper Situation.

Estimates of copper production for 1903 credit Arizona, Michigan and Utah with an increase over 1902 and give Montana and California a moderate decrease, says the Mining Reporter of Denver. The same estimates place the stocks of copper on hand in this country at the close of the year as normal, such as will not tend to affect the market price materially at the beginning of the year. Stocks of this metal in Europe, however, are reported below the normal point and the market may be strengthened by exportations from the United States. The copper production of this country for the year 1902 approximated 28,000 tons, the exports for same year amounting to about 164,450 tons, the imports not reaching over \$5,000 tons for that year. Undisturbed industrial conditions during 1904 will surely stimulate the consumption of this metal and result in a steady market and possibly higher prices.

#### Mining Notes.

Superintendent Kirby of the Daly West aves for camp again tomorrow morning. The Carlsa of Tintic is at the smelter with another consignment of copper ore which will be settled for today.

Capt. Henry Stern has returned from Bingham, after witnessing the performance at the new Yampa smelter.

George W. Keel, manager of the Littie Bell of Park City, says a derangement at the hoist will compel him to remain idle up there for several days.

Andrew J. Mallow here Manager

Andrew J. Malloy, long identified with mining interests in the West, came in from the East during the day to devote several days to the diggings. Secretary Joe Henshaw of the Royal opper and Gold Mining company, got the poper hand of rheumatism yesterday and was at his deak for a few hours. The New Year's edition of the Stateline Oracle is one that should find permanent abode in the home of every person who has already or who is seeking an interest in that camp of gold. It is intelligently
